

## Pre-made Negative Control Lentivirus

Cat#	Product Name	Amounts
<a href="#">CMV-Null-Bsd-PBS</a>	CMV Control lentiviral particles (Bsd) in PBS	200ul/each,  (1 x 10 <sup>8</sup> IFU/mL in PBS solution, Premixed with 10x Polybrene, 60 ug/ml)
<a href="#">CMV-Null-Neo-PBS</a>	CMV Control lentiviral particles (Neo) in PBS	
<a href="#">CMV-Null-Puro-PBS</a>	CMV Control lentiviral particles (Puro) in PBS	
<a href="#">CMV-Null-Hygro-PBS</a>	CMV control lentivirus (Hygro)	
<a href="#">CMV-Null-Zeo-PBS</a>	CMV control lentivirus (Zeo)	
<a href="#">CMV-Null-GB-PBS</a>	CMV Control lentiviral particles (GFP-Bsd) in PBS	
<a href="#">CMV-Null-GP-PBS</a>	CMV Control lentiviral particles (GFP-Puro) in PBS	
<a href="#">CMV-Null-RP-PBS</a>	CMV Control lentiviral particles (RFP-Puro) in PBS	
<a href="#">CMV-Null-RB-PBS</a>	CMV Control lentiviral particles (RFP-Bsd) in PBS	
<a href="#">CMV-Null-PBS</a>	CMV Control (No Antibiotic), Concentrated Lentivirus in PBS	
<a href="#">EF1a-Null-Bsd-PBS</a>	EF1a Control lentiviral particles (Bsd) in PBS	
<a href="#">EF1a-Null-Neo-PBS</a>	EF1a Control lentiviral particles (Neo) in PBS	
<a href="#">EF1a-Null-Puro-PBS</a>	EF1a Control lentiviral particles (Puro) in PBS	
<a href="#">EF1a-Null-Hygro-PBS</a>	EF1a control lentivirus (Hygro)	
<a href="#">EF1a-Null-Zeo-PBS</a>	EF1a control lentivirus (Zeo)	
<a href="#">EF1a-Null-GB-PBS</a>	EF1a Control lentiviral particles (GFP-Bsd) in PBS	
<a href="#">EF1a-Null-GP-PBS</a>	EF1a Control lentiviral particles (GFP-Puro) in PBS	
<a href="#">EF1a-Null-RP-PBS</a>	EF1a Control lentiviral particles (RFP-Puro) in PBS	
<a href="#">EF1a-Null-RB-PBS</a>	EF1a Control lentiviral particles (RFP-Bsd) in PBS	
<a href="#">EF1a-Null-PBS</a>	EF1a Control (No Antibiotic), Concentrated Lentivirus in PBS	

**Storage:** -80 °C, avoid repeat freeze/thaw cycles. Stable for 12 months.

### 1. Product Description:

GenTarget's lentivector system is Human Immunodeficiency Virus-1 (HIV) based plasmids for gene expression and knockdown. The lentivectors are used to

generate lentiviral particles (lentivirus) that can be transduced into almost all kinds of mammalian cells, including stem cells, primary cells, and non-dividing cells both *in vivo* and *in vitro*. Lentiviral Particles stably integrate into the transduced cells' genome for long term expression, making it a great gene transfer agent.

GenTarget provides pre-made lentivirus expressing fluorescent proteins, enzymes, human or mouse target. The lentivirus is generated under an [Optional Inducible CMV promoter \(TetCMV\)](#), or an enhanced constitutive **CMV promoter**, or an enhanced **EF1a promoter**. To serves as the negative controls for lentivirus treatment, GenTarget also provides the [Negative control lentivirus](#).

The controls are made from the same lentivector backbone as the target expression vector, cloned with a [Null spacer sequence](#) (200bp) replacing the target sequence. The control lentivirus is packaged in the same way as any target expression virus, but control lentiviruses do not express a specific target because the Null sequence does not contain a start codon. Please see the map scheme above for the control lentivector core-structure.

Control lentiviruses contain antibiotic markers matching that in our target expression lentiviruses. The control virus can be used alone to evaluate lentiviral transduction efficiency and for other applications.

VSV-G pseudotyped control lentiviruses are generated in 293T cells and provided as 200  $\mu$ l per vial in either DMEM medium (containing 10% serum) or concentrated in PBS solution. For more details about premade particles, please see [FAQs for pre-made lentiviral particles](#) (.pdf).

## 2. Key features:

- 1) High viral titer

- 2) Different antibiotic selection
- 3) Easy transduction monitoring by fluorescence
- 4) Ready to use: simply add 50  $\mu$ l per well in a 24-well plate.

### 3. Transduction Protocols:

**Note:** Pre-made lentivirus is provided ready to use status, simply added into your cell culture. The amount of lentivirus to add depends on cell type. In general, add 50  $\mu$ l of virus into one well in 24-well-plate where cell density is 50% to 75%. After 72 hours (no need to change medium), visualize positive transduction rate by fluorescence microscopy if applicable. For stable cell line generation, pass cells into medium containing antibiotic or perform fluorescence cell sorting followed by antibiotic selection. (**Note:** for suspension cells or the "hard-to-transduced" cell type, you may need to double the virus amount added.)

#### Day 0:

Seed cells in complete medium at the appropriate density and incubate overnight.

**Note:** at the time of transduction, cells should be 50%-75% confluent. For example, seed HeLa cells at  $0.5 \times 10^5$ /ml x 0.5ml in a well of a 24-well plate.

#### Day 1:

- Thaw the pre-made lentiviral stock at room temperature and add the appropriate amount of virus stock to obtain the desired MOI.
- Return cells to 37°C, CO<sub>2</sub> incubator. Do nothing.

**Note:** Try to avoid freezing and thawing. If you do not use all of the virus at one time, you may re-freeze the virus at -80 °C for future use; virus titer will decrease by ~10% for each freeze/thaw cycle.

#### Day 3:

At 48hr~72hr (Depend upon cell type) after transduction, check the transduction rate by fluorescence microscopy or calculate the exact transduction rate by flow cytometry (FACS or Guava).

#### Day 3 + (optional):

Sort transduced cells by FACS, or select by antibiotic killing. A pilot experiment should be done to determine the antibiotic's kill curve for your specific cell line (refer to the pertinent literature on generation of stable cell lines).

#### Note: Filter wavelength settings:

**GFP filter:** ~Ex450-490 ~Em525; **RFP filter:** ~Ex558 ~Em583;

#### 4. Safety Precaution:

GenTarget lentiviral particles adapt must advanced lentiviral safety features (using the third generation vectors with self-inactivation SIN-3UTR), and the premade lentivirus is replication incompetent. However, please use extra caution when using lentiviral particles. Use the lentiviral particles in Bio-safety II cabinet. Wear glove all the time at handling Lentiviral particles! Please refer CDC and NIH's guidelines for more details regarding to safety issues.

#### 5. Warranty:

**This product is for research use only.** It is warranted to meet its quality as described when used in accordance with its instructions. GenTarget disclaims any implied warranty of this product for particular application. In no event shall GenTarget be liable for any incidental or consequential damages in connection with the products. GenTarget's sole remedy for breach of this warranty should be, at GenTarget's option, to replace the products.

#### 7. Attachment: GenTarget's pre-made lentivirus product categories.

<b>Product Category</b>	<b>Product Description (please click into each category's page)</b>
<a href="#">Pathway Reporter</a>	Repoter Lentivirus for all kinds of pathway screening assays
<a href="#">Cell Immortalization</a>	Lentivirus for cell immortalization: Large T-antigen, hTERT, EBNA1/EBNA2, HpV16-E6/E7, Adenovial E1A, Kras_G12V, HOXA9, et al.
<a href="#">ImmunoOncology Research</a>	Lentivirus products for immuno therapy research: CAR and TCR; Assay Cell Lines for T-cell targeted killing assay and other cell-based assays; over-expression lentivirus products for the immune response targets; Cell surface antigens (CDs); immune checkpoint / Receptors; CRISPR gene Repair and knock-IN lentivirus;

<b>Product Category</b>	<b>Product Description (please click into each category's page)</b>
	CRISPR knockout lentivirus;
<a href="#">CAR-T, TCR Lentivirus</a>	<b>CARs</b> Lentivirus: Anti-CD19 /CD20 /CD22 /BCMA /hHER2 /HLA-A2 /TGF $\beta$ ; <b>TCRs</b> : MART-1/ NY-ESO1/ CD1d- $\alpha$ -GalCer/ TR $\alpha$ V3-F2A-TR $\beta$ V5-6;
<a href="#">CRISPR Gene Editing</a>	Preamde lentivirus express humanized wild-type <b>Cas9</b> endonuclease, the <b>dCas9</b> , gRNAs, <b>CRISPR</b> gene editing research
<a href="#">Epigenomic: CRISPRi and CRISPRa</a>	" <b>dCas9-Protein</b> " fusion Lentivirus for epigenomic modification, resulted in CRISPR interference (CRISPRi) or activation (CRISPRa).
<a href="#">Cell-Specific Reporter</a>	a set of reporter lentiviruses to express a luminescence or fluorescent reporter (firefly Luciferase, Renilla luciferase, RFP or GFP fluorescent marker) under a tissue specific promoter
<a href="#">Infectious Antigens</a>	Lentivirus that express all kinds of infectious antigens with C-term 6His-tag.
<a href="#">Virus Like Particles (VLP)</a>	Lentiviral Like Particles, pseudo-typed with a different envelope proteins.
<a href="#">Non-integrating LV</a>	Integration Defective Lentivirus, express different targets for transient expression without the unwanted insertional mutagenesis.
<a href="#">shRNA Knockdown</a>	Knockdown verified and customized shRNA lentivirus for target knockdown,
<a href="#">microRNA lentivirus</a>	Premade lentivirus expression human or mouse <b>precursor miRNA</b> . And <b>anti-miRNA</b> lentivector and virus for human and mouse miRNA.
<a href="#">Anti-miRNA lentivirus</a>	Pre-made lentivirus expression a specific anti-miRNA cassette.
<a href="#">Human and mouse ORFs</a>	Premade lentivirus express in a <b>human, mouse or rat</b> gene with RFP-Blasticidin fusion dual markers.
<a href="#">Luciferase expression</a>	Premade lentivirus for all kinds of luciferase protein expression: <b>firefly and Renilla, Red-Luc and more</b> , with different antibiotic selection markers.
<a href="#">Fluorescent Markers</a>	Lentivirus express all commonly used fluorescent proteins: GFP, RFP, CFP, BFP YFP, mRFP, unstable GFP

<b>Product Category</b>	<b>Product Description (please click into each category's page)</b>
	and others.
<a href="#">Luminescent Imaging</a>	Lentivirus express Nano-Latern as Bio-probes for in vivo imaging of sub-cellular structural organization and dynamic processes in living cells and organisms
<a href="#">Sub-cellular Imaging</a>	Lentivirus contain a well-defined organelle targeting signal fused to a fluorescent protein, great tools for live-cell imaging and for dynamic investigation of sub-cellular signal pathways.
<a href="#">Cytoskeleton Imaging</a>	A fluorescent marker (GFP, RFP or CFP) fusion with a cellular structure protein, provides a convenient tool for visualization of cytoskeletal structure
<a href="#">Unstable GFP</a>	Lentivirus express the the destabilized GFP (uGFP) which provides fast turnover responses in signal pathway assay and in knockdown / knockout detection
<a href="#">near-infrared RFP</a>	The near-infrared Red fluorescent (niRFP) expression Lentiviruses provides the whole-body images with better contrast and brighter images
<a href="#">Fluorescent-ORF fusion</a>	Pre-made lentivirus expression a " <b>GFP/RFP/CFP-ORF</b> " fusion target.
<a href="#">CRE recombinase</a>	Premade lentivirus for expressing <b>nuclear permeant CRE</b> recombinase with different fluorescent and antibiotic markers.
<a href="#">CRE, Flp ColorSwitch</a>	Lentivirus expressing "LoxP-GFP-Stop-LoxP-RFP" or "FRT-GFP-Stop-FRT-RFP" cassette, used to monitor the CRE or Flp recombination event in vivo.
<a href="#">SEAP Reporter</a>	lentivirus expressing SEAP under different promoters (TetCMV, EF1a, CAG, Ubc, mPGK, Actin-beta or a signal pathway responsive promoter),
<a href="#">TetR Repressor</a>	Premade lentivirus expressin TetR (tetracycline regulator) protein, the repressor protein for the inducible expression system.
<a href="#">rtTA Expression</a>	rtTA binds to the tetracycline operator element (TetO) in the presence of doxycycline (Dox). Used for Tet-On /OFF inducible system.
<a href="#">iPS factors</a>	Premde lentivirus for human and mouse iPS ( <b>Myc, NANOG, OCT4, SOX2, FGF4</b> ) factors with different fluorescent and antibiotic markers

<b>Product Category</b>	<b>Product Description (please click into each category's page)</b>
<a href="#">LacZ expression</a>	Express different full length <b><math>\beta</math>- galactosidase (lacZ)</b> with different selection markers
<a href="#">Negative control lentiviruses</a>	Premade <b>negative control lentivirus with different markers</b> : serves as the negative control of lentiviruses treatment, for validation of the specificity of any lentivirus target expression effects.
<a href="#">Other Enzyme expression</a>	Ready-to-use lentivirus, expressing a specific enzymes with different selection markers.
<a href="#">Ultra titer lentivirus</a>	Ultra-titer lentivirus used for the hard-to-transduced cells and for in vivo manipulation of sperm cells, or stem cells.
