

## HEK293/ Luciferase (firefly) Expression Stable Cell Line

Catalog Number	Product name	Amount
<a href="#">SC002-RP</a>	luciferase (firefly), HEK293 stable cells (RFP- Puromycin)	1 ml / vial  in 80% DMEM, 10% FBS, 10% DMSO

**Storage: liquid Nitrogen**

### **Product Description**

The HEK293 Cell Line is a permanent line established from primary embryonal human kidney cells transformed with sheared human adenovirus type 5 DNA. The expressed E1A adenovirus gene allows these cells to produce very high levels of protein.

This **Luciferase** (firefly II) and **RFP** co-expression stable cell line is transformed from the **HEK293** host cell line. Both Luciferase and RFP are constitutively co-express (mediated via 2A element), under the same enhance CMV promoter. The **Puromycin** marker was expressed under Rsv promoter. The following expression cassette was integrated into cell's genome.

#### core expression cassette:

This Luciferase is expressed at high level which can be detected by luciferin-D substrate *in vivo* and *in vitro*. The RFP signal can be visualized in every cell, under Fluorescent microscope with RFP filter setting.

### **Culture procedures**

1. Thaw the frozen vial of cells quickly in a 37°C water bath (1~3min), decontaminate the outside of the vial with 70% ethanol.
2. Transfer the entire contents of the cryovial into a T-75 cm<sup>2</sup> flask containing 20 ml of pre-warmed complete medium. Incubate the cells overnight in a 37°C incubator, 5% CO<sub>2</sub>.

3. On the following day, replace the medium with 20 ml of prewarmed, complete medium.
4. Incubate the cells and monitor cell density.
5. Pass cells (1:5 to 1:10 dilution) using 0.25% Trypsin-EDTA solution when the culture reaches ~90% confluent.
6. Freeze cells at a density of  $\sim 3 \times 10^6$  cells/ml using 90% complete medium with 10% DMSO.

## Complete medium

DMEM (high glucose)  
2mM L-glutamine  
10% Fetal Bovine Serum (FBS)  
0.1 mM MEM Non-Essential Amino Acids (NEAA)  
1% Pen-strep / Antibiotic-antimycoplasma

- Optional to add: final **0.5 ug/ml** of Puromycin (Note: do not add Puromycin at 1st time thaw culture. This final Puromycin concentration is also depend on the potency of its brand)

## Quality Control

Each vial contains  $\sim 2 \times 10^6$  cells with >95% viability before freezing. Cells are verified to be free of bacteria, viruses, and mycoplasma.

## Warranty and user terms

- 1) This product is warranted to perform as described when used in accordance with this manual. GenTarget's sole remedy for breach of warranty should be, at the option of GenTarget, to repair or replace the product if this product does not meet the stated quality standard.
- 2) By paying the purchase price, the buyer is granted a non-transferable, non-exclusive license to use the product. This product is sold **for research and development purposes only**. For commercial use, please contact Gentarget Inc for license.
- 3) This product is limited to the laboratory that the product is delivered to. This Product is not for resale, distribution, or transfer for any purpose, including transfer of the Product as a component of any product(s); GenTarget will retain all rights for this Product's license and other intellectual property.
- 4) This Product should be used only for non-profit purposes including any products and services usages; furthermore, **research use only** means

that this product is excluded, without limitation, from resale, repackaging, or modification for the making or selling of any commercial product(s) or service(s) without the written approval of GenTarget. You may contact our Business Development department at [support@gentarget.com](mailto:support@gentarget.com) for product proprietary information.

- 5) GenTarget is not liable, and does not have any responsibility or liability, whatsoever for any direct and indirect, consequential, or other damages resulting from using this Product.
- 6) GenTarget **do not** provide the protected reporter's sequences information for all our cell line products.
